

Leveraging open source test projects for NFVI compliance validation

Georg Kunz, Tim Irnich, Serena Feng

## **OPNFV**

OPNFV facilitates the development and evolution of NFV components across various open source ecosystems. Through system level integration, deployment and testing, OPNFV creates a reference NFV platform to accelerate the transformation of enterprise and service provider networks. Participation is open to anyone, whether you are an employee of a member company or just passionate about network transformation.

OPNFV defines use cases, integrates & tests what other projects (OpenStack, Kubernetes, ODL, OVS, fd.io) create!

# OPNFV Verified Program (OVP)

- OPNFV Verified Program (OVP) verifies that a commercial VIM/NFVI exposes the same
  - key APIs,
  - behaviors, and
  - characteristics

as the OPNFV reference platform

- Main objective: Reduce VIM selection and VNF onboarding cost
  - Establish industry-accepted technical baseline
  - Simplify RFIs and RFPs
- Main components of OVP
  - 1. Dovetail: automated test and reporting tool leveraging OPNFV and upstream test tools
  - 2. OVP web portal: upload, display, and review results

2018.01

# **OPNFV** Verified Program (OVP)

- Test scope and coverage
  - Based on tests developed by OPNFV and upstream communities
- Releases of OVP
  - Tied to specific releases of OPNFV reference platform
    - 2018.01 => Danube
    - 2018.0x => Fraser
  - 6 months release cadence
  - 3 months shift wrt OPFNV platform releases
  - Labeled by release date (e.g. 2018.01)
- Ways of Participation
  - Self testing: Deploy and run Dovetail in private lab
  - 3<sup>rd</sup> party labs: Utilize services offered by selected labs (under development)

#### Infrastructure

2018.01

## Relationship to OpenStack "Powered" programs

- OpenStack Powered programs
  - Maintained by OpenStack Interop working group
  - Governed by the OpenStack Board of Directors
  - Test cases selected from Tempest and run by RefStack tool
  - Originally focused on API interoperability of (public) clouds
  - Ongoing efforts to establish programs targeting specific capabilities
    - · Heat, Designate, NFV
- Relationship to OVP
  - OVP is a complementary effort focusing on NFV use cases
  - Dovetail / OVP attempt to adopt best practices and lessons learned
- Joint challenge
  - Improve test coverage of NFV capabilities across communities

**POWERED** 

## Scope of OPNFV Verified

#### OPNFV Verified 2018.01

#### **Mandatory test cases**

- OpenStack interop API tests (205 tests)
- Basic layer 2 packet forwarding (2 tests)
- OpenStack control service high availability (8 tests)

#### **Optional test cases**

- IPv6 tenant networks (25 tests)
- BGPVPNs (4 tests)
- Fundamental VIM capabilities (30 tests)

#### Potential Future Scope

#### Future test case candidates

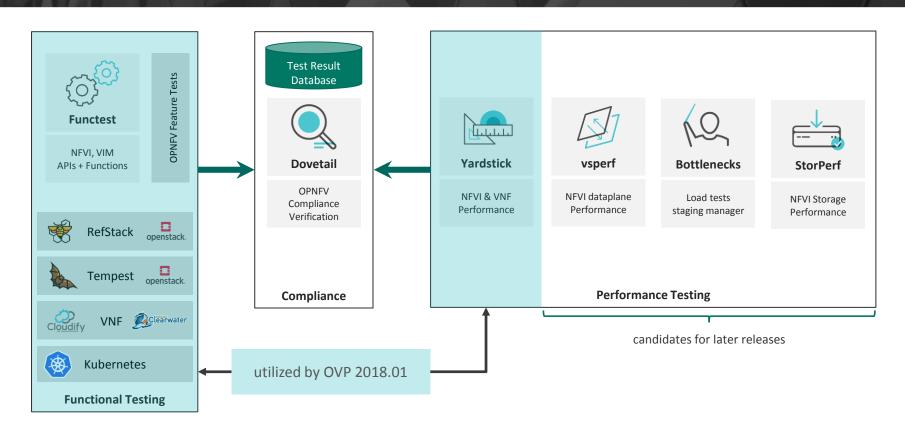

- Neutron Trunk ports
- OpenStack Tempest smoke tests
- OPNFV SNAPS smoke tests
- BGPVPN Tempest tests
- SDN Controller (OpenDaylight) high availability
- vSwitch (Open vSwitch) high availability
- Sample VNF lifecycle management
- Load tests
- ... more to come ...

## Compliance Verification Workflow

- 1. Submission of participation form
- 2. Testing
- 3. Submission of results
- 4. Notification of reviewers
- 5. Community review of test results
- 6. Grant of use of program marks
