TC Agenda 20200302

Agenda of Technical Community Discussion on March 02, 2020

Agenda:

- Software Validation Demo - Sridhar Rao to provide a demo of an initial prototype to support CNTT software (aka OpenStack manifest) validations. S/W Validations was a key topic discussed during the Prague DDF sessions. This tool will be used to confirm both the integrity of the manifest files to be used for software installs, then also the valid deployment and configuration of software. This RI-1 validation is a pre-requisite to running RC-1 conformance tests. Refer to the S/W Validation wiki on the CIRV page for more details - Software Delivery Validation.
- HDV code development
