Vote Text	Does the TSC approve the creation of project branches in Git by PTL?
Status	**PASS**
Vote Tally (-1 / 0 / +1)	0 / 0 / 10
Vote Close Date	11 Feb 2020
Comment Close Date	30 Jan 2020

Additional Background Information

As per the email thread [1], there is interest among different projects to have the ability to create their own branches in Git. My understanding is at this point in time, the only way to create a branch is via a git commit to the releng repo with the git tag and name in a yaml file, and then have that go to the releng committers to +2.

For projects that want more flexibility in controlling their branches, this is a fairly large overhead. It is also a common practice in other open source communities to allow projects to manage their own branches.
